changeproof evidence pack: card-billing v1.4 (us-defense-cnsa2, synthetic)

Repository: card-billing
Commits ddca01a253f2..ce1ab964abbc: 2 changes. Generated 2026-10-07T12:00:00Z by changeproof 0.1.0.

Release decision

Release decision: 1 of 2 changes fail a policy rule.
open: ce1ab964abbc agent-changes-need-independent-approval: noreply@anthropic.com took part in this change and no independent approver is recorded (git-commit/ce1ab964abbcfa49e433d8b050b18415ab0c075d:8)

How to check this pack

Everything in this report is read from the signed attestations in the attestations folder, and nothing else. Run: changeproof pack-verify <pack folder> --trust <public key> ... It verifies every signature offline and rebuilds this report and the OSCAL files from the attestations; each must match the digest in pack.dsse.json byte for byte.
Behavioral equivalence means the characterization tests found no difference. It is evidence from tests, not a proof for all inputs. Programs it could not test are listed.

Crypto profile

Crypto profile: cnsa2
evidence signing: ml-dsa-87; release signing: lms-sha256-192; hash: sha-384
this pack is signed with ml-dsa-87 (key ce58c10e18a1b205)
release signature: lms-sha256-192 (key f29308d78603b961)

Change 1 of 2: commit 4b060f669f41

Who and why
author: priya.raman@billing.example (git author, git-commit/4b060f669f4138026d439b4f674efd44af69f409:3)
committer: priya.raman@billing.example (git committer, git-commit/4b060f669f4138026d439b4f674efd44af69f409:4)
approver: dana.okafor@billing.example (Approved-by trailer, git-commit/4b060f669f4138026d439b4f674efd44af69f409:9)
agent: feebot@tools.example (Assisted-by trailer, git-commit/4b060f669f4138026d439b4f674efd44af69f409:8)
ticket: LOAN-2 (commit subject, git-commit/4b060f669f4138026d439b4f674efd44af69f409:6)
What it touches: 2 entities changed, 2 impacted (2 definite, 0 probable, 0 possible), 0 gaps reported. Touches crypto: no.
src/batch/FEECALC.cbl:15-41 paragraph MAIN-PARA (modified)
src/batch/FEECALC.cbl:35 flow COMPUTE (modified)
src/batch/FEECALC.cbl:11 data LK-FEE (definite)
src/batch/FEECALC.cbl:1-41 program FEECALC (definite)
relied on by statement-print through batch-fees
Inside the impact set: FEECALC 14 tests, 0 different: no behaviour change found.
Outside the impact set: equivalent. 37 tests (outside-impact-set): 37 same, 0 different, 0 errors.
Linked to this change's impact attestation by its digest.
Policy rules (OPA 1.21.1): all hold.
no-new-quantum-vulnerable-crypto: pass
agent-changes-need-independent-approval: pass
equivalence-required-outside-impact-set: pass

Change 2 of 2: commit ce1ab964abbc

Who and why

author: priya.raman@billing.example (git author,
    git-commit/ce1ab964abbcfa49e433d8b050b18415ab0c075d:3)
committer: priya.raman@billing.example (git committer,
    git-commit/ce1ab964abbcfa49e433d8b050b18415ab0c075d:4)
agent: noreply@anthropic.com (Co-authored-by trailer,
    git-commit/ce1ab964abbcfa49e433d8b050b18415ab0c075d:8)
ticket: LOAN-3 (commit subject, git-commit/ce1ab964abbcfa49e433d8b050b18415ab0c075d:6)

What it touches: 2 entities changed, 2 impacted (2 definite, 0 probable, 0 possible), 0 gaps reported. Touches crypto: no.

src/batch/FEECALC.cbl:15-41 paragraph MAIN-PARA (modified)
src/batch/FEECALC.cbl:24 flow COMPUTE (modified)
src/batch/FEECALC.cbl:11 data LK-FEE (definite)
src/batch/FEECALC.cbl:1-41 program FEECALC (definite)
relied on by statement-print through batch-fees

Inside the impact set: FEECALC 14 tests, 5 different: behaviour this change altered, to check against its ticket.

different: FEECALC test FEECALC-05 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-06 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-08 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-10 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-13 (src/batch/FEECALC.cbl:1-41)

Outside the impact set: equivalent. 37 tests (outside-impact-set): 37 same, 0 different, 0 errors.

Linked to this change's impact attestation by its digest.

Policy rules (OPA 1.21.1): a rule fails.

no-new-quantum-vulnerable-crypto: pass
agent-changes-need-independent-approval: fail
  deny: noreply@anthropic.com took part in this change and no independent approver is recorded
    (git-commit/ce1ab964abbcfa49e433d8b050b18415ab0c075d:8)
equivalence-required-outside-impact-set: pass

Controls this evidence answers

Mapped by the engine's framework table. A control number marked unverified has not been read in its source yet. Planned evidence is not in this pack.

NIST SSDF PS.2.1 (source checked 2026-10-07): software integrity verification information for acquirers
  signed attestation, verifiable offline; hybrid signatures survive a distrusted algorithm
  evidence pack: every attestation, report and OSCAL file verifiable and rebuildable offline
NIST SSDF PS.3.1 (source checked 2026-10-07): archive the files and supporting data of each release
  evidence pack: every attestation, report and OSCAL file verifiable and rebuildable offline
NIST SSDF PW.8.2 (source checked 2026-10-07): scope, design and perform testing and document the results
  evidence pack: tests run inside the impact set at base and head, with what the change altered
  behavioral-equivalence attestation: characterization tests from the base replayed at the head, for COBOL linkage subprograms outside the impact set
  test subset selected to cover the impact set
NIST SP 800-53 CM-3 (source checked 2026-10-07): configuration change control
  change record: who, what, when, where and how for every commit
  change record: requester, implementer and approvers kept apart; self-approval flagged
  change record: ticket and change request copied from the commit, never guessed
  policy gate: high-criticality-needs-two-approvers
  signed attestation, verifiable offline; hybrid signatures survive a distrusted algorithm
  OSCAL 1.1.2 assessment results, validated against the NIST schema
NIST SP 800-53 CM-3(2) (source checked 2026-10-07): testing, validation and documentation of changes
  evidence pack: tests run inside the impact set at base and head, with what the change altered
  behavioral-equivalence attestation: characterization tests from the base replayed at the head, for COBOL linkage subprograms outside the impact set
  change record: who, what, when, where and how for every commit
NIST SP 800-53 CM-4 (source checked 2026-10-07): impact analyses
  impact predicate: changed and impacted entities, each with provenance
  impact predicate: confidence tier and dependency path per impacted entity
  impact predicate: reliant_systems, from the component config
NIST SP 800-53 SC-12 (source checked 2026-10-07): cryptographic key establishment and management
  impact predicate: touches_crypto when a change touches a crypto call
NIST SP 800-53 SC-13 (source checked 2026-10-07): cryptographic protection
  impact predicate: touches_crypto when a change touches a crypto call

  policy gate: no-new-quantum-vulnerable-crypto blocks a change that adds RSA, ECC, DSA or DH
SWFT: no controls mapped (the DoD CIO page
    (https://dodcio.defense.gov/In-the-News/Article/4367436/software-fast-track-initiative, read
    2026-10-14) names the 24 April 2025 memo and its four focus areas but no vendor artifacts; the
    SBOM and third-party assessment asks are in press reports only, so unverified)
CNSA 2.0 (source checked 2026-10-14): quantum-resistant algorithms for national security systems
  impact predicate: touches_crypto when a change touches a crypto call
  policy gate: no-new-quantum-vulnerable-crypto blocks a change that adds RSA, ECC, DSA or DH
  signed attestation, verifiable offline; hybrid signatures survive a distrusted algorithm
