changeproof evidence pack: card-billing v1.4 (general-hybrid, synthetic)

Repository: card-billing
Commits 96d679cbb195..77ec47e33107: 2 changes. Generated 2026-10-07T12:00:00Z by changeproof 0.1.0.

Release decision

Release decision: 1 of 2 changes fail a policy rule.
open: 77ec47e33107 agent-changes-need-independent-approval: noreply@anthropic.com took part in this change and no independent approver is recorded (git-commit/77ec47e33107b346431f3194558ae0cebfbf6648:8)

How to check this pack

Everything in this report is read from the signed attestations in the attestations folder, and nothing else. Run: changeproof pack-verify <pack folder> --trust <public key> ... It verifies every signature offline and rebuilds this report and the OSCAL files from the attestations; each must match the digest in pack.dsse.json byte for byte.
Behavioral equivalence means the characterization tests found no difference. It is evidence from tests, not a proof for all inputs. Programs it could not test are listed.

Crypto profile

Crypto profile: hybrid
evidence signing: ml-dsa-87, ecdsa-p384; release signing: lms-sha256-192; hash: sha-384
this pack is signed with ml-dsa-87 (key ce58c10e18a1b205)
this pack is signed with ecdsa-p384 (key 8477f308417476ce)
release signature: lms-sha256-192 (key f29308d78603b961)

Change 1 of 2: commit 085d6bff07ee

Who and why
author: priya.raman@billing.example (git author, git-commit/085d6bff07ee33704f51327869bb05b835d15bb5:3)
committer: priya.raman@billing.example (git committer, git-commit/085d6bff07ee33704f51327869bb05b835d15bb5:4)
approver: dana.okafor@billing.example (Approved-by trailer, git-commit/085d6bff07ee33704f51327869bb05b835d15bb5:9)
agent: feebot@tools.example (Assisted-by trailer, git-commit/085d6bff07ee33704f51327869bb05b835d15bb5:8)
ticket: LOAN-2 (commit subject, git-commit/085d6bff07ee33704f51327869bb05b835d15bb5:6)
What it touches: 2 entities changed, 2 impacted (2 definite, 0 probable, 0 possible), 0 gaps reported. Touches crypto: no.
src/batch/FEECALC.cbl:15-41 paragraph MAIN-PARA (modified)
src/batch/FEECALC.cbl:35 flow COMPUTE (modified)
src/batch/FEECALC.cbl:11 data LK-FEE (definite)
src/batch/FEECALC.cbl:1-41 program FEECALC (definite)
relied on by statement-print through batch-fees
Inside the impact set: FEECALC 14 tests, 0 different: no behaviour change found.
Outside the impact set: equivalent. 37 tests (outside-impact-set): 37 same, 0 different, 0 errors.
Linked to this change's impact attestation by its digest.
Policy rules (OPA 1.21.1): all hold.
no-new-quantum-vulnerable-crypto: pass
agent-changes-need-independent-approval: pass
equivalence-required-outside-impact-set: pass

Change 2 of 2: commit 77ec47e33107

Who and why

```
author: priya.raman@billing.example (git author,
    git-commit/77ec47e33107b346431f3194558ae0cebfbf6648:3)
committer: priya.raman@billing.example (git committer,
    git-commit/77ec47e33107b346431f3194558ae0cebfbf6648:4)
agent: noreply@anthropic.com (Co-authored-by trailer,
    git-commit/77ec47e33107b346431f3194558ae0cebfbf6648:8)
ticket: LOAN-3 (commit subject, git-commit/77ec47e33107b346431f3194558ae0cebfbf6648:6)
```

What it touches: 2 entities changed, 2 impacted (2 definite, 0 probable, 0 possible), 0 gaps reported. Touches crypto: no.

```
src/batch/FEECALC.cbl:15-41  paragraph MAIN-PARA (modified)
src/batch/FEECALC.cbl:24  flow COMPUTE (modified)
src/batch/FEECALC.cbl:11  data LK-FEE (definite)
src/batch/FEECALC.cbl:1-41  program FEECALC (definite)
relied on by statement-print through batch-fees
```

Inside the impact set: FEECALC 14 tests, 5 different: behaviour this change altered, to check against its ticket.

```
different: FEECALC test FEECALC-05 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-06 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-08 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-10 (src/batch/FEECALC.cbl:1-41)
different: FEECALC test FEECALC-13 (src/batch/FEECALC.cbl:1-41)
```

Outside the impact set: equivalent. 37 tests (outside-impact-set): 37 same, 0 different, 0 errors.

Linked to this change's impact attestation by its digest.

Policy rules (OPA 1.21.1): a rule fails.

```
no-new-quantum-vulnerable-crypto: pass
agent-changes-need-independent-approval: fail
  deny: noreply@anthropic.com took part in this change and no independent approver is recorded
    (git-commit/77ec47e33107b346431f3194558ae0cebfbf6648:8)
equivalence-required-outside-impact-set: pass
```

Controls this evidence answers

Mapped by the engine's framework table. A control number marked unverified has not been read in its source yet. Planned evidence is not in this pack.

```
SOC 2 CC8.1 (source unverified; stand-in read 2026-10-14 at kirkpatrickprice.com): change
    management: changes are authorized, designed, tested, approved and implemented
  change record: who, what, when, where and how for every commit
  change record: requester, implementer and approvers kept apart; self-approval flagged
  change record: ticket and change request copied from the commit, never guessed
  impact predicate: changed and impacted entities, each with provenance
  impact predicate: confidence tier and dependency path per impacted entity
  policy gate: high-criticality-needs-two-approvers
  behavioral-equivalence attestation: characterization tests from the base replayed at the head, for
    COBOL linkage subprograms outside the impact set
  signed attestation, verifiable offline; hybrid signatures survive a distrusted algorithm
  OSCAL 1.1.2 assessment results, validated against the NIST schema
ISO/IEC 27001 A.8.32 (source unverified; stand-in read 2026-10-14 at opensecurityarchitecture.org):
    change management
  change record: who, what, when, where and how for every commit
  change record: requester, implementer and approvers kept apart; self-approval flagged
  change record: ticket and change request copied from the commit, never guessed
  impact predicate: changed and impacted entities, each with provenance
  impact predicate: reliant_systems, from the component config
  signed attestation, verifiable offline; hybrid signatures survive a distrusted algorithm
ISO/IEC 27001 A.8.25 (source unverified; stand-in read 2026-10-14 at opensecurityarchitecture.org):
    secure development life cycle
  impact predicate: changed and impacted entities, each with provenance
  impact predicate: touches_crypto when a change touches a crypto call
  signed attestation, verifiable offline; hybrid signatures survive a distrusted algorithm
ISO/IEC 27001 A.8.28 (source unverified; stand-in read 2026-10-14 at opensecurityarchitecture.org):
    secure coding
  impact predicate: touches_crypto when a change touches a crypto call
ISO/IEC 27001 A.8.29 (source unverified; stand-in read 2026-10-14 at opensecurityarchitecture.org):
    security testing in development and acceptance
  impact predicate: changed and impacted entities, each with provenance
```

```
  test subset selected to cover the impact set
  behavioral-equivalence attestation: characterization tests from the base replayed at the head, for
    COBOL linkage subprograms outside the impact set
```
